

TEMPORARILY REPLACEMENT OF INDUSTRIAL PC WITH NOTEBOOK IN CASE OF ANOMALY

Gea Procomac Spa communicates that some of the machines that you possess are equipped with industrial PCs which are not of last generation, therefore part of the cards or the components necessary for their functioning may not be available as spare parts.

In case of breakages or anomaly, Gea Procomac will activate itself in order to intervene on these industrial PCs only up against your explicit request, therefore with rather long delivery lead times, because it will be necessary to convert the applicative existing software making it compatible with the hardware components of the latest generation.

Usually as these PCs are the main interface instrument between man/machine, it's easily understood the huge difficulty in confrontation that you would find yourselves in case of non functioning of the PCs for a rather long length of time.

For this reason we think that it's extremely useful to you in receiving a solution that can counterbalance in an eventual sudden malfunction of the PC installed on the machine(s) putting yourselves in a condition which can overcome this emergency condition with replacement equipment, of use until the industrial PC has been restore.

Gea Procomac suggests the supply of a PC notebook configured with a software programme applicative of your machine(s), which by means of an Ethernet interface can be connected to the PC completely replacing all the industrial PCs functions currently installed.

In order to effect this operation in complete safety and without causing further mishaps, the presence of our technician (on site) will be necessary in order to transfer all data and relevant software licences on the notebook, assuring you therefore the perfect functioning of our technical proposal.

Notebook specifications
